

On the vehicle, the structure 25 covered by the bumper corner 21" includes a hatch 26 giving access to the bulbs 24 once the bumper corner is mounted on the vehicle.

Page 11, lines 1-7, delete current paragraph and insert therefor:

This embodiment is advantageous in that the bumper corner 60 extends upwards as far as the roof 63 of the vehicle, thus making it possible to incorporate the arrangement constituting the housing, and thus the light unit itself, in the upper portion of the vehicle. This means that light signaling is more visible and preserves the light unit in the event of minor impacts.

IN THE CLAIMS:

Please replace claim 1 as follows:

1. (Amended) A combination of a car bumper and a light unit for a motor vehicle, the car bumper covering a portion of a waistline of a vehicle body and comprising an outside skin formed by a wall of plastics material, the light unit having as component elements both a housing suitable for containing at least one light source and a glass enabling light emitted by said light source to be diffused, wherein the outside skin of the car bumper includes an arrangement forming at least a portion of at least one of the component elements of the light unit.

Please add new claim 10 as follows:

--10. A combination of a car wing and a light unit for a motor vehicle, the car wing covering a portion of a waistline of a vehicle body and comprising an outside skin formed by a wall of plastics material, the light unit having as component elements both a housing suitable for containing at least one light source and a glass enabling light emitted by said light source to be diffused, wherein the outside skin of the car wing includes an arrangement forming at least a portion of at least one of the component elements of the light unit.--
